Bachmann electronic sees great potential in autonomous shipping

Feldkirch, Austria - July 22, 2022

The company is preparing intensively for this area which is becoming a reality through the standardization of the interfaces between different technology suppliers and is presenting its solutions at the SMM.

The MTP standard, which describes the standardization of communication between systems and the control level, reduces commissioning times and protocols such as DDS, enabling redundant, easy-to-integrate applications to provide information in real time. Bachmann's expertise in smart maintenance applications enables shore support during operation and prevents unexpected failures. Even though ships are currently still primarily conventionally powered, Bachmann is contributing to an environmentally friendly maritime future with integrated solutions for energy management and control. In conventional shipping, the company supports safe control and operation by offering Openbridge design objects in a standard Scada solution.

Bachmann brings together partners, customers, product managers and application engineers to exchange individual strengths, ideas, solutions and technologies. Through joint efforts, visions are transformed into tangible automation solutions. Industry-wide collaboration allows system integrators and equipment manufacturers to focus on their unique, high-quality and fully tested solutions with minimal development and commissioning time.

Bachmann electronic GmbH at SMM:
Hamburg, Germany
06.09.-09.09.2022
Hall/Booth: B6.305

About Bachmann electronic GmbH

We deliver complete, certified automation solutions, helping customers in the maritime and offshore sectors worldwide to integrate their systems into one powerful platform. Our intelligent, scalable technology is based on over 50 years of integrated engineering experience. By implementing state-of-the-art solutions, we optimize the operational capability of individual units, turbines and vessels, or the entire fleet. Our holistic, certified system both increases revenues and maximizes performance and safety.
