Press Release
––
atvise® 3.8 is now available

Eisenstadt, Austria – July 14, 2022

Bachmann Visutec, competence center for visualization and operations of the automation specialist Bachmann electronic GmbH, offers complex visualization and control station solutions based on pure web technology and OPC UA. With atvise® the company delivers a unique product portfolio for the realization of modern automation solutions. The focus of the new version atvise® 3.8 is primarily on the topics of security and usability in engineering.

The integrated web server as well as all internal security mechanisms were subjected to a comprehensive test by an external specialist in the field of security. "We passed this so-called "penetration and vulnerability test" with flying colors, which not only confirms atvise's pioneering role in the field of web visualizations, it is also a guarantee for the comprehensive protection of our customers' systems," explains Detlef Sommer from Product Management HMI/SCADA at Bachmann.

The atvise® builder shines in new splendor - in addition to a refreshed design, it contains new usability features for even more efficient engineering: the editors for graphics, script and XML are available as independent synchronized tabs, the ECMAScript syntax checker and the syntax highlighter have been enhanced and adapted.

Many innovations and enhancements can also be found in the area of scripting or access control of graphical objects; Treeview and the M1 Scope Integration have been fundamentally revised and HighMaps has been included in the scope of delivery.
